SUMMARY

AI Developer & System Architect specializing in production-grade AI/ML, GenAI and Computer Vision Products. Expert in engineering scalable AWS pipelines and high-throughput FastAPI backends. Recognized by IIT Bombay for retail analytics and a track record of 50+ high-impact AI systems

WORK EXPERIENCE

Cyrino - Associate Software Developer Dec 2025 – Present

- Architecting scalable Generative AI pipelines for structured data extraction and multi-step reasoning, utilizing LLMs and FastAPI to ensure high-throughput performance.
- Engineering cloud-native infrastructure on AWS, leveraging Lambda for serverless logic and SageMaker for model hosting and real-time performance monitoring.

Pentation Analytics - Data Science Intern July 2025 – Nov 2025

- Developed a generative AI agent to automate procurement by analyzing 100+ vendor quotations and parsing RFPs via autonomous web scraping.
- Engineered a RAG pipeline with a FastAPI/PostgreSQL backend and integrated Google APIs for logistical intelligence.

Griffyn Robotech - Vision Engineer Intern Jan 2024 – Jan 2025

- Deployed YOLOv8 and SIFT models for industrial quality control, achieving 98% accuracy and 0.5-micron measurement precision.
- Integrated vision models with Epson robotic arms and optimized PyTorch models for real-time edge device inference.

PROJECTS

1- Dr. ASTAN - AI-Driven Retail Analytics System

An end-to-end retail analytics platform using YOLOv5mu , Deep SORT , and Power BI to track shopper behavior and generate actionable insights.Achieved recognition as a Top 500 finalist at IIT Bombay’s Eureka ; system designed to process 10+ camera feeds and deliver automated NLP-driven daily reports.

2- LLM from Scratch - Transformer Architecture

Implemented a GPT-style decoder-only transformer from the ground up using PyTorch. Developed custom modules for Multi-Head Attention, Scaled Dot-Product calculation, and GELU activation. Integrated Byte-Pair Encoding (BPE) for tokenization and optimized the training loop with AdamW, focusing on understanding gradient dynamics and loss convergence.

SKILLS

Languages	Python, SQL (PostgreSQL, MySQL, SQLite), Linux/Bash, C++
AI/ML/GenAI	PyTorch, LangChain, RAG Agents, LLMs, OpenCV, YOLO, Deep SORT, MediaPipe, Scikit-learn, Pandas, NumPy
Cloud & DevOps	AWS (Lambda, SageMaker, S3), FastAPI, Docker, Git, Google Cloud APIs
Data & Analytics	MongoDB, Power BI, Tableau, Excel, Jupyter Notebooks
